Systemic Biological Nitrogen Fixation

Envita® allows systemic biological nitrogen fixation for all crops. It enables cells throughout the plant, including foliage and roots, to fix their own nitrogen.

Envita provides a constant, season-long supply of nitrogen from within the cells of the plant – exactly where nitrogen is needed. Our technology fills the gap between crop requirements and nitrogen supply.

2025 Envita Performance Guarantee

Key Documents

Envita is applied as a seed treatment or foliar spray, making it easy to integrate into existing farming operations. The microbe enters the plant upon application, establishing a symbiotic relationship that lasts through the crop's lifecycle. Farmers apply it once per season, and the plant naturally regulates its nitrogen intake, reducing excess fertilizer requirements.

Testimonials

Write some text here about testimonials

"Adding Envita to our corn program was a game-changer. We saw more uniform growth and a 12-bushel per acre yield increase – without adding extra nitrogen. It's now a staple in our operation."
